

VENNELA ADIPUDI

Tampa, Florida | (813) 943-5424 | 1vennela2018@gmail.com | github.com/vadipudi1 | linkedin.com/in/vennela-adipudi

SUMMARY

Cybersecurity professional with experience in SOC operations, incident response, and AI-powered security automation. Skilled in Python, SIEM platforms, threat detection, and security investigations, with hands-on experience developing multi-agent cybersecurity systems using LLMs, MCP integrations, and agent orchestration frameworks. Passionate about applying AI to enhance security operations, streamline investigations, and improve analyst decision-making through intelligent automation.

EDUCATION

University of South Florida College of Engineering – Dean's List

Bachelor of Science in Cybersecurity

Tampa, FL

December 2026

SKILLS

- **Programming & Scripting:** Python, SQL (MySQL, SQLite), Golang, C, HTML, CSS, Object-Oriented Programming
- **Data Analysis & Visualization:** Pandas, Matplotlib, Excel, MATLAB, Lucidchart
- **Cybersecurity Tools & SIEMs:** GreyMatter, IBM QRadar, LogRhythm, Splunk, Exabeam, Sumo Logic, Microsoft Sentinel, Wireshark, Nmap, Burp Suite, Proxmox VE, VMware Workstation
- **AI for Security & Automation:** Opencode, Claude Code, LiteLLM, MCP Integrations, LangChain, ReAct Agents, LLM Agents, RAG, AI Evaluation Frameworks, Agent Orchestration
- **Security & Networking Concepts:** Threat Intelligence, MITRE ATT&CK, Vulnerability Analysis, Detection Engineering, Security Automation, SOC Operations, Attack Lifecycle, TCP/IP, SSL/TLS, Network Hardening, Privilege Escalation
- **Operating Systems & Virtualization:** Linux/Unix, Windows, macOS, Bash, Kali Linux, Proxmox, Virtualization
- **Development Tools & Platforms:** Git, VS Code, Jupyter Notebook, Anaconda, GitHub

EXPERIENCE

GuidePoint Security – Application Security Intern

May – August 2026

Reston, VA | Remote

- Architected a multi-agent cybersecurity investigation platform using Opencode, LiteLLM, and MCP integrations to automate incident triage, threat intelligence analysis, remediation guidance, reporting, and quality assurance workflows.
- Supported development of a Capital One cyber range for AI security training and simulations.
- Analyzed security alerts within a cyber range and evaluated AI effectiveness across multiple attack and response workflows.
- Presented a capstone project and live demonstration to 100+ stakeholders.

ReliaQuest – GreyMatter Operations Intern

June – August 2025

ReliaQuest Headquarters | Tampa, FL

- Monitored and managed the end-to-end alert lifecycle across 6+ SIEM platforms (QRadar, LogRhythm, Splunk, Exabeam, SumoLogic, Azure Sentinel) using GreyMatter, supporting real-time incident response and security engineering workflows.
- Investigated live security alerts through log analysis, reducing false positives and improving detection accuracy.
- Performed root-cause analysis on active incidents, contributing to detection rule enhancements for recurring threat patterns.
- Collaborated directly with customers and non-technical stakeholders, translating technical findings into incident reports.

ReliaQuest Cybersecurity Labs

February – March 2025

ReliaQuest Headquarters | Tampa, FL

- Participated in a four-week cybersecurity program utilizing GreyMatter to perform incident analysis on real-time exploits.
- Analyzed all phases of the attack cycle, identifying threat actors, interpreting logs, and developing mitigation strategies.
- Engaged in hands-on labs in a team environment, enhancing leadership and collaboration skills.
- Strengthened communication and problem-solving skills through presentations and technical discussions.

PERSONAL PROJECTS

Multi-Agent Incident Response Platform

August 2026

- Orchestrated multiple AI agents to simulate SOC analyst workflows across investigation, threat intelligence, and reporting.
- Benchmarked agent performance against attack scenarios to evaluate investigation quality and response effectiveness.
- Generated structured security findings such as MITRE ATT&CK mappings, threat assessments, and remediation guidance.

Automated NoSQL Injection Exploitation Tool

October 2025

- Developed an automated NoSQL exploitation tool that extracted challenge flags through blind enumeration and custom payload generation.
- Automated character-by-character flag extraction using a custom Python script, outperforming manual BurpSuite attempts.
- Used LLM-assisted scripting to optimize payload construction and accelerate blind enumeration.

CERTIFICATIONS

- CompTIA Security+ (Expected August 2026)
- AI Fluency: Framework & Foundations
- Git and GitHub Certificate
- Google Cybersecurity Professional Certificate
- Claude 101

LEADERSHIP & INVOLVEMENT

- Society of Women Engineers (SWE)
- Whitehatters Computer Security Club
- Women in CyberSecurity (WiCyS)
